"Consistency in the terminology used to explain and discuss medicine also seems to be lacking". "The structure of the chapters, in particular in the earlier editions, has been criticised for being repetitive, longwinded and convoluted and the language used has been criticised as being too technical and academic".Fettman, Mark. Measles virus (MV) is a highly neurotropic virus that has the ability to infect and replicate in human neural cells. To identify viral and host factors involved in the successful infection of neural cells, we have developed a MV neuropathogenesis model in which cultured neural cells from human and mouse are permissive to MV. These primary cell systems permit a detailed analysis of the fate of MV from the initial interaction with the cellular plasma membrane to the final assembly of a mature virus. In this review we summarize our current knowledge of the factors involved in the infection of neural cells by MV and how this knowledge has been obtained through studies using these systems.A large drop in the number of Americans filing applications for unemployment benefits last week is likely to boost the chances that the labor market is tightening, which should make it easier for the Federal Reserve to keep interest rates low for a long time. Initial claims for jobless aid, a proxy for layoffs, declined 53,000 to 211,000 in the week ended Nov. 1, Labor Department figures showed Thursday. The previous week's total was revised up to 212,000 from 212,000. Claims are considered a proxy for layoffs because companies that report large drops in employment often slash workers' hours or let them go. The employment component of claims was also revised down slightly. Applications had been reported as down by 3,000 from the previous week. Initial jobless claims are a good indicator of layoffs and are closely followed by the two closely watched payrolls reports released by the government.Next week◆ 2d92ce491b
