External links Category:Mexican mathematicians Category:Living people Category:Year of birth missing (living people)Risky behavior in the Mexican children with epilepsy. We designed a cross-sectional study to investigate the prevalence and the profile of risky behaviors in a sample of Mexican children with epilepsy (n = 128) and in a reference sample of children from the general population (n = 281). Risks were measured by means of the Child Abuse and Neglect Instrument, and the Child Behavior Checklist. Risks were more frequent in the sample of children with epilepsy than in the reference sample of children (odds ratio [OR] = 7.74, 95% confidence interval [CI] = 2.49-23.53). We also found a higher probability of risky behaviors in children with epilepsy when compared with the reference sample of children (OR = 2.64, 95% CI = 1.17-5.87). The results of the present study are in line with the literature, suggesting that children with epilepsy represent a risk group. of the Judicial Council for the Ninth Circuit in 1972. Defendants' proposed jurisdictional statement is therefore accurate. [3] Section 5 gives rise to two questions of law. First, is the suit one to enjoin the future implementation of a new rule and thereby avoid a decision of this court on the issue, or is it one to annul the old rule and thereby avoid an advisory opinion? See supra at 547. Second, is the case one which should be certified to the Supreme Court, rather than be tried in the district court? See supra at 548. As to the first question, since the constitutionality of the new rule is now before this court, the issue need not be avoided. As to the second question, the Court has already said in Bethlehem Steel, supra at 517, that a case should be certified only if it presents one of those unusual situations in which the answer to the question of law at issue is so clear that the district court would not benefit from the district court's clarification of the question. The challenged regulation here involves the federal apportionment of revenue-raising power. This is not one of those unusual situations. On the contrary, the Fifth Amendment issue involved is of serious and far-reaching significance. [4] In the
