What if your steak tastes like chalk and your soup tastes like salt? It's time to upgrade your taste buds. It's easy to forget that while humans can learn to adapt to pretty much any circumstance, our food preferences can still cause for major problems. Now we're all faced with the challenge of simultaneously learning to make up for being terrible at anything. It's true. People have died from eating chemically-treated food. That's why, for the past few years, researchers have been trying to figure out exactly how and why humans can taste so much better now than they did in ancient times. And they've found the right answer: you can't go back. You have to learn to like bad food now. Yesterday, researchers from the University of Leeds in the U.K. published their findings on how that's happening. They found that, in the past, people who had access to good food were probably just part of a small elite. Sure, some of them were probably farmers who knew the meaning of plenty, but most of them were probably just a tiny handful of people. These were the ones who probably had the best scotches and oysters on the shelves, but that's it. But, according to the study, everything changed somewhere between the rise of the agricultural revolution and the first industrial revolution, and scientists are only now starting to understand why. Before the industrial revolution, people ate what they could and loved what they got. As a result, they were probably pretty happy with their food. But, at some point, these people started making things a bit more efficient. That meant that they needed more food than before, so they needed to start eating like crazy to get enough. But, while they were eating like crazy, they started making food more and more expensive. This would've made it a lot harder to afford, which meant that they needed to figure out how to eat cheaper than before. This is where things got weird. As prices rose, people started to notice their limited options. They started to see that they couldn't afford to buy the same food over and over again. 2d92ce491b
