Field of the Invention The present invention relates to an image processing apparatus, method, and program that processes image data obtained by reading a photographic image. 2. Description of the Related Art There have been proposed digital cameras that are capable of obtaining data of still images of photographic images. The problem is that, in taking a shot of an object, such as a person, the size of the object is out of the range that can be captured by the camera. Therefore, one possible solution is to take a plurality of shots in succession at a small scale so that a group of shots covers the entire range of the object. In addition, one possible solution is to correct the shift of the object based on information obtained by looking at the object during photographing so that the camera can capture the entire object. For example, Japanese Unexamined Patent Application Publication No. 2008-311022 discloses a camera having a video input unit that acquires video of an object that is present in the video range of the camera, a processing unit that acquires data of still images that overlap and are obtained from the video that is acquired by the video input unit, and a control unit that detects shifts of the object that is present in the video range of the camera based on the video that is acquired by the video input unit and the still images that are obtained by the processing unit and that controls the video input unit so that shifts of the object are reduced.The UFC decided not to hold this weekend's UFC 161 pay-per-view event in Toronto. Toronto had wanted to put together a traditional five-city UFC event, and there were conversations going on with all of the cities involved. It was initially thought that the UFC was going to end up in Toronto anyway, but that now seems unlikely. It's unknown what will happen with the cards currently scheduled for Toronto, but those cards are not expected to be affected. The UFC has a show this weekend in Las Vegas. The UFC is still looking at different venues for future events. Toronto is looking at the possibility of going up against Los Angeles or Las Vegas on pay-per-view for the next event. The UFC did not want to do two events on pay-per-view back to back. -- Greg GarrisonQ: How to prove this $\left(\frac{-1}{2}\right)$

Show same line angle in 3D and 2D: See line angle inside a 3D model or print it along with a 2D plan view. As you rotate around a plan view, the line angle remains fixed in 3D, and you can see it along the paper (or paper sheet) (video: 2:09 min.). Helpful Templates: It's always a better idea to start by drawing what you need than to try and draw it from scratch. It's easier to add a line than to erase one. Instead, let Autodesk provide you with helpful templates. The Help template in your library offers tools to help you start your next drawing. You'll find views that show all the important aspects of your drawing at once and view templates for special tools, such as the section profile tool or the help page tool. Preview and Zoom: Improve visibility and efficiency of your drawings with a new preview and zoom tools. Quickly magnify portions of your drawings to spot details and analyze complex shapes, and use toolbars to crop, drag, and zoom. Let users resize and position drawings easily, and zoom on the fly. You can save time by configuring a custom preview area to show only the drawing area and a selected viewport. The new Zoom feature and option to quickly increase/decrease the size of drawings at the touch of a button. Zoom on the fly allows you to quickly enlarge a portion of your drawing so you can work with details without scrolling through the entire drawing. New drawing actions and interfaces for the new Zoom feature: You can select an area in the preview to magnify the size of the drawing. Alternatively, you can use the drag tool to move a portion of the drawing to a different zoom area. The new Viewport view in the drawing area is similar to the viewport in the panel and shows a grid for the drawing area and a selected viewport. The difference is that you can quickly zoom on the fly. You can also select multiple viewports and use the Select viewport tool to move them to a different location in the view. The drawing area is now resizable with the new Resize button in the status bar. Zoom control bar: Use the new Zoom tool to zoom in or out on the fly. You can zoom in and out on multiple portions of your drawing
