Following the launch of the first experiments in space, the world is now focused on the future potential of this pioneering technology. The exploration of space not only represents a technological marvel, it also carries ethical consequences and we should recognise this now. At the same time, the Internet and communication technologies are evolving and enabling different people and communities to interact with one another in new ways, which are sometimes called 'third spaces' by some authors. This presentation will make the point that the Internet is an important third space and that it has both positive and negative aspects, like all things. Furthermore, it will highlight the need to regulate the way in which these technologies are used in order to minimise their negative impact on the community and the society. Marmuts Marmuts are small, ground-dwelling rodents found throughout most of the Northern Hemisphere. They are one of the most diverse rodent groups, with species found in very different environments such as deserts, forests, and tundra. Due to their relatively recent common ancestor and diversity of species, they have become an excellent model for studying phylogenetic relationships and divergence in rodents. The taxonomic subdivision of marmots includes the species found in the subfamily Tamandua, which are found in Central America, the West Indies, and southern Mexico. The genus Tamandua includes the following species: Vermateria A genus of bats. Hot on the heels of the arrival of the new Xbox One X console, Microsoft is making some much-needed changes to its next-gen console ecosystem. The first major change is to bring all games to 1080p on the Xbox One S. Xbox One S will not be receiving any new features like the All Access pass, and will remain a value console. Xbox One S will be an affordable upgrade from the current gen Xbox One, and the price is \$249.99. The Xbox One S will also be on sale for \$109.99 after the holidays. This is down from the \$249.99 the Xbox One was available for before the holidays. New Game Preview Program The new game preview program allows gamers to test drive new games on the Xbox One S in an effort to find new games to play. At launch, Microsoft will bring 30 new games to the Xbox One S, including Gears 5. A few people who bought an Xbox One S before the launch of the Xbox One X will not be able to upgrade to the Xbox One X, as Microsoft says it is limiting the sale of new consoles. Users can test drive new games on the Xbox One S for free, with titles including Gears 5, Forza Horizon 3, Sea of Thieves, and more. Starting January 12th, any Xbox One S owners can download game demos for free, with the Xbox Game Preview service. Xbox Game Pass Microsoft is also introducing a new gaming subscription service named Xbox Game Pass. The service will come in two tiers – the current \$10 per month plan will remain, and a new \$15 per month plan will be added, allowing subscribers to play any game in the library from any console. The cost for an Xbox Game Pass Ultimate is \$15 a month. This is \$5 more than the current Game Pass plan. It's a good news for consumers as the Xbox Game Pass will provide a simple way to try games without having to buy the full game to see how much you like it. Xbox Project xCloud At E3, Microsoft announced it was working on a new cloud-based gaming service called Xbox Project xCloud. The service will allow gamers to stream console games from the cloud to any internet-connected device. Xbox Project xCloud is still a few months away from release, and when it does arrive, Microsoft
