I have been using shapes in Microsoft Office programs for a few years and find that they are easy to use. They are a lot more powerful than using images in presentations. I have created many of the example slide presentations for you. Just follow the steps in the tutorial. If you have any problems please tell me. The example files are all available so you can just highlight the.csh file you want. Instead of downloading the 648 Meg files, just copy the.csh file to your desktop and open it. There is a tutorial in the files that describes how to insert the included bitmap layers and place your own text etc. Feel free to use these tutorials at your leisure! Enjoy!

We will only discuss the basic version of Photoshop. If you need more information or for more help, look for _Photoshop CS 4 for Dummies_ by Nick Gore (Wiley). The maximum amount of memory used to process one layer at a time is 1.4 gigabytes. (A gigabyte is 1 billion bytes.) Thus, even on a dual-processor, 2 gigabyte machine you can only process one or two layers at a time. Add the two together, and this tells you that the memory available for the whole thing is less than 1.4 gigabytes. A gigantic canvas A Photoshop canvas contains many pages of your images. You can manipulate each page as a single layer, or combine it with other layers to create complex images. In Figure 5-1, you can see that the background image is a very low-resolution photo and the woman in the foreground is almost translucent and has a very bright background, which means that Photoshop has to load the background layer into memory first. Load the layers one by one with the stacking order on top. You can switch to the Layers panel by pressing ⌘-Y (Mac) or Ctrl+Y (Windows) to cycle through the layers on the canvas. To set the visibility of a layer, click the eye icon at the top left of the Layers panel, as shown in Figure 5-1, or press the V key on your keyboard to toggle the Visibility drop-down menu in the Layers panel. You can also right-click the layer thumbnail image and choose Toggle Visibility from the pop-up menu that appears. With most images, once you finish editing a layer and are ready to save the file, you can click the New Layer button at the bottom of the panel to create a new layer or press the Enter key. Photoshop layers are always visible unless you hide them using the Hide Command button (Windows) or the eye icon (Mac). **Figure 5-1:** The Layers panel and panel can display all your image layers. Overlays and editable layers The most important tools in Photoshop are the selection tools and the Adjustments panel, as well as the layer tools. The layer tools are invaluable for creating complex combinations of images. But before you can do that, you must first create a selection. Selections Photoshop has a lot of selection tools, as shown in Figure 5-2. They all

The past two weeks have been interesting for the kingdom of Saudi Arabia. For one thing, Iran and Lebanon's Prime Minister Saad Hariri decided to end the impasse, when both sides agreed to hold separate meetings on Sept. 28 and 29 in Istanbul to work out their differences. For another thing, in a move that surprised many, the kingdom announced a $3 billion investment of many Saudi Aramco projects in the United States, indicating that Saudi Arabia is in need of a change in administration after the ouster of President Donald Trump's administration. Aramco is a kingdom's national leader, but one often overlooked by financial reporters. It's likely the kingdom would not have publicly announced its US projects without a nod of approval from the Trump administration. This announcement came after Saudi Arabia's economic minister, Mohammed Al-Jadaan, met with his US counterpart, Wilbur Ross. They discussed a broad range of issues, including how to "develop and diversify" the kingdom's economy. Aramco projects include five power plants in Texas, two wind farms in South Carolina, two refineries in Louisiana and the $12 billion Saudi Aramco 3 development in Texas. The kingdom had already announced $45 billion of investments to diversify its economy and build an export industry. It also announced a new $38.8 billion refining project in Jubail, Saudi Arabia. Perhaps the most surprising announcement was the Saudi Aramco 3 in Texas. The project, developed by Saudi Aramco, is the kingdom's largest and probably most expensive oil project, and a natural for Aramco to involve in, given its national prestige. The project involves a 195-square-kilometer area of land with 37 million barrels of oil and would require additional water from wells. Aramco currently operates refineries and petroleum plants in California, Pennsylvania, Texas, Louisiana, Ras Tanura and Jeddah. It is not clear whether the Trump administration is delaying or is going to oppose the project, given that the kingdom is looking to get back to a normal relationship with the United States after the turmoil of the Trump era. That turbulence began with Trump's decision to boycott a Saudi-led summit in Riyadh to speak with the Muslim world on countering extremism. That was followed by Trump's controversial decision to recognize Jerusalem as Israel's capital, which Saudi Arabia and much of the Muslim world do not recognize as

Q: How can I install this.tar.gz file? In the file manager, I am looking at a.tar.gz file and wondering how I can install it? Please see attached image. I am on Ubuntu 12.04 LTS 64 bit. A: How do I install a tar.gz file in Ubuntu? Like this: $ wget $ tar xvfz xubuntu_11.10.tar.gz Note that the way you refer to the file is hard to follow when it's changed, so you're better off putting it on a website. [Lunetta] Morning, folks. I always love coming to work because when I wake up in the morning I hear my dog, Thunder, groaning a little bit in pain, because I've got him on the floor with a cold. I have not kept his out of the dog shelter too long now. But I enjoy coming to work, because I love it when I get to work with a dog. Morning. The fun time is on the phone today, so folks, we'll talk about keeping it on the phone, and I've got a question for you right now, and that is, what's happening with the police? They've been bombing institutions again. This morning, two explosions down in Miami. This is just a continued series of rapid arrests in the last 24 hours. We had a senior couple arrested with a month's supply of ecstasy. They've arrested a young black female for distribution of cocaine. Several other arrests associated with that stuff, and we've got a lot of stuff going on, OK? We've got a number of upcomings and downfalls to talk about on the phone, OK? We'll get to that in a moment. Let me read you some more names from today's rapid arrests. Let me read you all these numbers, then we'll take questions. We've got "stop and hold" arrests, current events, mayor's speech, et cetera. Let me read you all these names. This is the young man's mother who was arrested for
